Module 11 : AVERAGEIF

11.1 AVERAGEIF

The AVERAGEIF function in Excel is similar to the AVERAGE function in that it calculates the arithmetic mean of a set of values, only of values that meet certain criteria.

For example, you can specify that it should only take into account values greater than 30 or 100.

The formula for the AVERAGEIF function is:

=AVERAGEIF(range, criteria, [average_range])

The range should refer to the range of cells you want to be included in the calculation.

Insert the relevant criteria needed to find the average.

average_range is optional, although you could specify even further what cells to take into account.

11.2 Video Instruction

AVERAGEIF – 2m 29s

11.3 Task

Estimated Time: 10 minutes

Download the worksheet below and practise AVERAGEIF using the video above as a reference.

Download Worksheet

Option #2: Worksheet without formula
