Module 16: MEDIAN Function

16.1 MEDIAN Function

The MEDIAN function returns the median number of a set of numbers.
The formula for the MEDIAN function is as follows: =MEDIAN(number1, number 2,...)

Here, number 1 is required but any additional numbers are optional. Ranges of data can also be included. Keep in mind that the data the cells are referring to could include names, arrays, or references that contain numbers. If an argument doesn't have any numbers, the MEDIAN function will return 0. There is a maximum of 255 numbers that can be input.

16.2 Video Instruction

How to use the MEDIAN function – 1m 18s

16.3 Task

Estimated Time: 10 minutes Download the worksheet that accompanies this video by clicking below. Once downloaded practise using the MEDIAN function using the video above as a reference.
