

Module 30: Treemap Chart

30.1 Treemap Chart

A Treemap chart lets you view your data in a hierarchical manner, which makes it easy to identify patterns in terms of popularity, prices, volume, and others.

Treemap charts divide up categories into different sized rectangles that are proportional to the amount or number (units) they represent.

In order to create a Treemap chart, you first need to input your data where you organize larger to smaller categories from left to right columns. When you have finished inputting your data, highlight the table, click the Insert tab, then click Insert Hierarchy Chart and finally Treemap.

Colors will automatically be selected for you, but you can format and personalize these in the Format. You can also format how the labels appear by clicking Format, Series Options, Label Options, then choosing the Options you would like.

30.2 Video Instruction

Treemap Chart - 2m 23s

30.3 Task

Estimated Time: 10 minutes

Download the worksheet below and practice Treemap Charts using the video as a reference.
