Module 20 : RANDBETWEEN Function (Insert Random Numbers)

20.1 RANDBETWEEN Function

The RANDBETWEEN function returns random integer numbers between minimum and maximum limits you specify.

A different random number is calculated every time.
The formula for the RANBETWEEN function is as follows: =RANDBETWEEN(bottom, top)

Bottom refers to the smallest integer, or minimum, you want the function to return.

Top refers to the largest integer, or maximum, you want the function to return.

For example, if you want the RANDBETWEEN function to return an integer between 1 and 100, you would type: =RANDBETWEEN(1,100) When you press enter, a random number will be returned in that cell.

Another function (not discussed in the video) is =RAND(), which will return a random number between 0 and 1.

20.2 Video Instruction

How to use the RANDBETWEEN function – 2m 01s

20.3 Task

Estimated Time: 10 minutes

Download the worksheet that accompanies this video by clicking below. Once downloaded practise performing the RANDBETWEEN function in Excel using the video above as a reference.
