

Module 3 : Multiply

3.1 Multiplying

In Excel, you can easily multiply numbers in cells, just as you would with a calculator.

You can do this by selecting the cell where you want the answer to appear.

There are two important elements you cannot forget: First, it is important that you put the equals sign before the operation. Second, the sign to multiply is the asterisk (*). Place the asterisk between the two numbers or cell references you want to multiply, and press Enter.

To multiply: **=cell1*cell2** Or just insert the numbers directly in the cell, e.g: =10*5 Press Enter.

3.2 Video Instruction

How to Multiply in Excel - 1m33s

3.3 Task

Estimated Time: 10 minutes

Download the worksheet that accompanies this video by clicking below. Once downloaded, practise multiplying in Excel using the video above as a reference.
