

Module 12 : Create a Pivot Chart

12.1 Create a Pivot Chart

One of the chart types available in Excel is a Pivot chart.

This type of chart will let you filter your data, which is particularly useful if you have a lot of complex worksheet data that contain text, numbers and headings. A pivot chart will show all the same data that a regular chart will, but the filtering controls allow you to quickly analyse a subset of your data.

With worksheet data it is possible to create a Pivot Chart without first creating a Pivot Table. Excel will even recommend the right kind of pivot chart for your data set. You can also create a Pivot Chart from data that is already included in a pivot table.

To create a Pivot Chart:-

Select your pivot table, go to the Insert tab and click on Pivot Chart

Choose your chart type and then click OK.

You can then filter the data you want to see.

You can also customise your chart by clicking on the Design tab.

12.2 Video Instruction

How to Create a Pivot Chart in Excel - 2m 34s

12.3 Task

Estimated Time: 20 minutes

Download the worksheet that accompanies this video by clicking below. Once downloaded, follow the video above and you will see how a Pivot Chart is created.
