

Module 21 : Depreciation Formula

21.1 Depreciation Formula

Excel offers five different methods for calculating depreciation.

The type you would use depends on how you want to calculate depreciation and how an asset depreciates over its life.

The five functions are:

- 1. SLN The Straight Line function. This will show depreciation that is equal for each period over the set timescale.
- 2. SYD The Sum of Years' Digits function.
- 3. DB The Declining Balance function.
- 4. DDB The Double Declining Balance function.
- 5. VDB The Variable Declaring Balance function.
