

Module 24 : DPRODUCT

24.1 DPRODUCT

The DPRODUCT function in Excel will multiply the value of all numbers in a column or database that contains the criteria you set.

DPRODUCT is part of the Database function group that performs basic tasks in a large field of data.

The formula is written as: **=DPRODUCT(database, field, criteria)**

Database - This is the range of cells that make up your database or list.

Field - This is the column that you would like to return data from. You can either enter the column name between quotation marks, for example "Name" or the column number without quotation marks, such as 1.

Criteria - This is the cell range that contains the criteria you specify.

24.2 Video Instruction

DPRODUCT Function - 2m 02s

24.3 Task

Estimated Time: 10 minutes Download the worksheet that accompanies this video by clicking below. Once downloaded, follow the video above and you will see how the results are reached for the DPRODUCT function.
