

Task:

From the comments on the right identify the Researcher/organisation they were attributed to. Enter the name in the adjacent blank space.

<input type="text"/>	<p>-----, a primatologist, spoke with the Wall Street Journal about chimps, elephants and rats. He has studied these three animals, which are capable of showing empathy.</p>
<input type="text"/>	<p>According to ----- cats and dogs have temporal, frontal, parietal, and occipital lobes in their cerebral cortex just as humans do.</p>
<input type="text"/>	<p>Even ----- was incorrect in calling animals “soulless automatons”.</p>
<input type="text"/>	<p>The researchers at ----- trained the dog to walk and sit in a MRI machine.</p>
<input type="text"/>	<p>----- stated that “animal cognition” is nothing but an oxymoron because while animals are capable of learning they cannot think or feel.</p>
